Confluences

Support Statement

Confluences is made for iOS 12 and above. Headphones are required. The app will prompt you to download a "Project Pack" which contains about 500MB of sound files, so we recommend downloading it over WiFi before heading to the site.

Please set your device to "Airplane Mode" before heading out. We recommend starting in front of the Ucross Gallery on Big Red Lane and proceeding in any direction. Sound regions are indicated in light green on the map and are clustered around Big Red, the Schoolhouse, the Raymond Plank Center and hikes that branch of Coal Creek Road.

Once you are on the site, launch the app and press the "Enable Tracking" button. Stand outside with a clear view to the sky for about 3 minutes. This allows the GPS signal to lock in and settle. If you are within the regions indicated on the map, and the GPS has registered your location, you will begin to hear sounds.

We recommend disabling power saving mode for optimal performance.
